Bottle Necks

+ Problem Description

There are N bottles. i th bottle has $A[i]$ radius. Once a bottle is enclosed inside another bottle, it ceases to be visible. Minimize the number of visible bottles.

You can put i th bottle into j th bottle if following condition is fulfilled:

- 1) i th bottle itself is not enclosed in another bottle.
- 2) j th bottle does not enclose any other bottle.
- 3) Radius of bottle i is smaller than bottle j (i.e. $A[i] < A[j]$).

+ Constraints

$1 \leq N \leq 100000$.

$1 \leq A[i] \leq 10^{18}$.

+ Input Format

First line contains a single integer N denoting the number of bottles.

Second line contains N space separated integers, i th integer denoting the radius of i th bottle.

$(1 \leq i \leq N)$.

+ Output

Minimum number of visible bottles.

+ Test Case

+ Explanation

Example 1

Input

8

1 1 2 3 4 5 5 4

Output

2

Explanation

1st bottle can be kept in 3rd one $1 \rightarrow 2$, which makes following bottles visible [1,2,3,4,5,5,4]

similarly after following operations, the following will be the corresponding visible bottles

Operation ? Visible Bottles

2 ? 3 [1,3,4,5,5,4]

3 ? 4 [1,4,5,5,4]

4 ? 5 [1,5,5,4]

1 ? 4 [5,5,4]

4 ? 5 [5,5]

finally there are 2 bottles which are visible. Hence, the answer is 2
